M3 TOUCH

The Solution for Portable Device & Content Management in Educational & Training Facilities

With NetSpot:

Remotely manage and deliver training content to any device, anywhere around the world!

Refresh training content between class sessions within minutes! Faster turnaround allows for more courses per day and more people trained in less time!

Track every student's course progress, retrieve survey responses or exam results, and upload them to any storage location!

Schedule and remotely perform IT updates for any application (even the OS) in unattended fashion!

You are tasked with ensuring that staff/students complete course training promptly; NetSpot manages your fleet of devices & content, so you can achieve your mission!

Employ one complete & versatile solution to seamlessly manage any device-type (tablet, laptop), running any operating system (OS), anywhere in the world on your network, in the same installation!

Keep devices and content current with the latest OS or configuration images. Update content remotely & unattended, across your entire network.

Ensure physical access control to all devices and secure your content with administrative permission tools. Guarantee complete privacy and security of your information and devices.

Eliminate device-downtime by scheduling content updates for immediate or off-hour delivery. Save time with updates that can be deployed within minutes, to some or all devices, anywhere.

Achieve a Return on Investment measured within months by reducing IT & device inventory costs. Focus IT resources on developments and improvements, rather than maintenance.

Enjoy a 360° view of the network with real-time data reporting. The self-managed Dashboard monitors device performance, user identification, and provides detailed tracking information.

# M3 TOUCH

NetSpot is:

An innovative and versatile solution providing security and content management for any portable device, running any operating system (OS), anywhere around the world!

Operating a modern-day educational training facility is not a simple task; there are students and staff to manage, various course subjects and content to provide, trainee progress to monitor, as well as instructor evaluations, test results, and feedback to capture.

Adding to the challenge is the fact that facilities regularly offer diverse courses, to different groups of students, using the very same portable devices multiple times a day. It's clear that a robust solution to manage and protect these devices and content is needed.

NetSpot provides a software and hardware platform, which allows administrators to secure and track their equipment, while delivering dedicated content to any portable device on the network, exactly when it is needed! This reduces the IT staff involvement required and the turnaround time needed between sessions.

The NetSpot Effect: Facilities are able to optimise their operations by offering more training sessions, to more students, in less time, with lower costs!

NetSpot can:

Push and pull device information: Retrieve current data from a device, wipe it clean, and install new content for a different course delivery

Reduce the turnaround time between class sessions: Update content within minutes, remotely, and without IT staff intervention.

Schedule and remotely perform IT monitoring tasks and install updates for any application (even the OS) in unattended fashion!

Traditional printed materials & classes have been replaced by digital devices & courseware.

Traditional device & content management has been replaced by **NetSpot!**

Optimise your content and devices with **a solution that pays for itself in a matter of months!**

With all the challenges of course delivery, content management, data capture, and device security, NetSpot is the ideal teaching assistant to optimise your training operations!
